

Arnhem – Holland, 15th September

## AHT Netherlands – A Class of its own!

### Hoge Boekel Estate – Enschede

In the late 19th century in the east of Holland, the textile industry was flourishing. In that time it was quite common, that the captains of this industry build beautiful mansions for their families, such as at the Hoge Boekel estate in Enschede. The present owner decided to completely renovate the project, which took about 3 years at a cost of 1,5 million Euro. As he insisted to have the best quality and comfort in his home when it came to choosing the heating system, he chose the AHT Amorphous Metal Ribbon heating mats without any hesitation.

## **DeMors BV Industrial Plant - Rijssen**

DeMors is a fully industrialized carpentry company in the east of Holland (Rijssen), producing wooden doors, window frames, panels and complete wooden interiors for their customers to the highest possible standards. Recently a new canteen was built for all the factory workers, whereby the wooden interior had to be representative for the quality that DeMors provides. It was for this reason, that over 100 m<sup>2</sup> infra red mats were installed to comfort the workers.

## **Philips Plugin City - Eindhoven**

Philips is one of the most famous groups in Holland and in the world. It used to produce light bulbs, radios and televisions in a great factory area in the South of the Netherlands (Eindhoven) where thousands of employees were stationed. As Philips stopped production in the early nineties and went into medical equipment this huge complex became available for start-up companies in the green tech and creative industry. Due to this, Eindhoven is the most innovative city in the whole of Europe. It is no wonder, that in this environment AHT Amorphous Metal Ribbon heating mats were installed in 'Plug-in City', a permanent demonstrator of experimental and sustainable building methods.
