Waar de zon schijnt, is de maan niet nodig! Laren Underpass Outdoor Heating Project

The Heated Roads Consortium headed by Grontmij NV, Reef Infra BV and GFSC Group and supported by A.H.T. Netherlands B.V. have just carried out the installation of AHT Outdoor heating ribbons in a public underpass in Laren, Gelderland province-Holland. A total of 1200m of AHT Outdoor heating ribbons were used to de-ice a total of about 50m X 3.6m on both sides of the underpass. The interesting detail of this project is that it has been split in 4 separate sections which will be controlled separately and each one will have different top layers such as asphalt and cobble stones asphalt etc. The data and experience of this project will be used by the Heated Road Consortium for much bigger projects in the pipeline in the near future in order to optimize the performance of the AHT outdoor ribbons and the other material used in road construction.

Please see below some photos from the Laren underpass installation as well as the following video showing how the installation was made from beginning to end:

We would like to take this opportunity to say a very big thanks and express our deep appreciation for their belief in AHT as well as their hard work and complete support to Mr Cees Veerhoek and Mr Han Hartman of Grontmij and Mr Ron Van Wijk of AHT Netherlands. Cees, Han and Ron have been the pioneers of AHT Outdoor heating and from the very beginning were the pillars on which AHT build its reputation as a leading world class electric heating manufacturer. They are not only partners but also true friends and are very important members of the AHT family and as Ron said in Dutch referring to AHT during our last joint meeting “**Waar de zon schijnt, is de maan niet nodig**” meaning **who needs the moon, when the sun is shining or in everyday English.....**

Why settle for less when you have the best? AHT!
